

## **DISCLAIMER**

This air pollution emission inventory was prepared using secondary dataset collected from relevant authorities and literature. The methods used to build the emission inventory was peer reviewed and available in this website.

Newly developed emission factors ([under the process of getting peer reviewed/ or under publication](#)) were used in the development of the emission inventory.

It is to be noted that the development of the emission inventory is a dynamic process and can be updated with availability of refined or high resolution dataset.

We are grateful to our collaborators, The ExxonMobil Research and Innovation, for the partnership which enabled us to undertake the study to form the basis of this inventory. We are also grateful to the peer reviewers who reviewed this inventory and the methods used to estimate them and thus facilitated the preparation of this document.
